EXPERIENCE

Wezume – AI/ML Intern

Nov 2025 – Mar 2026

Remote, India

- Built an ML culture-fit scoring model that extracts vocal pitch features from audio and ranks candidates against recruiter profiles — integrated into Wezume's live hiring platform via REST API.
- Owned full pipeline: audio feature extraction → model training → API deployment, reducing manual candidate screening effort significantly.

PROJECTS

Oil Spill Drift Forecasting | [GitHub](#)

2026

- Designed a CNN–LSTM–Attention deep learning model to forecast oil spill trajectories from multi-modal satellite inputs (SAR imagery, wind, ocean currents, bathymetry) with physics-based advection constraints.
- Built an end-to-end train–evaluate–visualize pipeline with custom physics loss terms and CI/CD via GitHub Actions.

Battery Data Extraction – LLM + XAI Pipeline | [GitHub](#)

2025

- Engineered an NLP pipeline using Llama-3-70B (Groq) + tabula-py to extract 8 battery metrics from unstructured scientific PDFs — achieving ~90–95% extraction accuracy.
- Trained a Random Forest Regressor on document features; deployed a Streamlit dashboard with SHAP-based explainability and CSV export.

Movie Inferno – AI Recommendation Platform | [GitHub](#)

2025

- Shipped a full-stack movie recommendation app with an integrated AI chatbot, real-time Supabase sync, and production deployment on Vercel.
